Assessment

Assessment Task 2: Project Portfolio

Manuel Sergio Perez Espitia

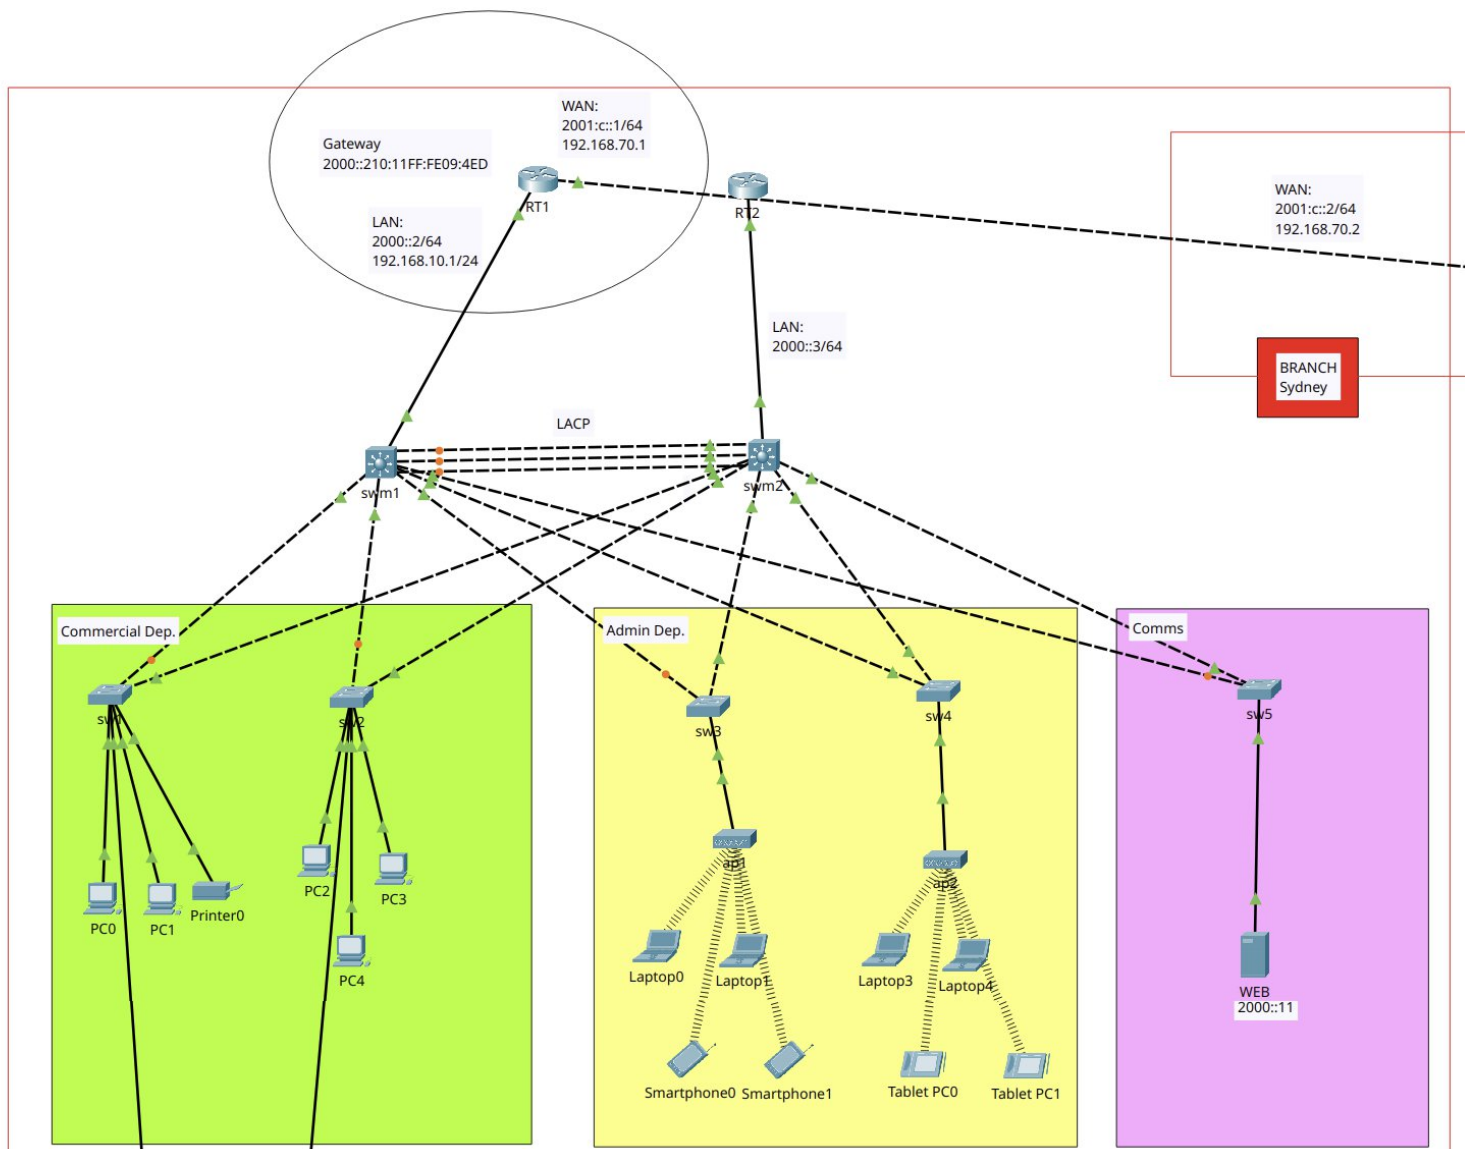

We are the network engineer responsible for implementing the required WAN connectivity for ABC Enterprises.

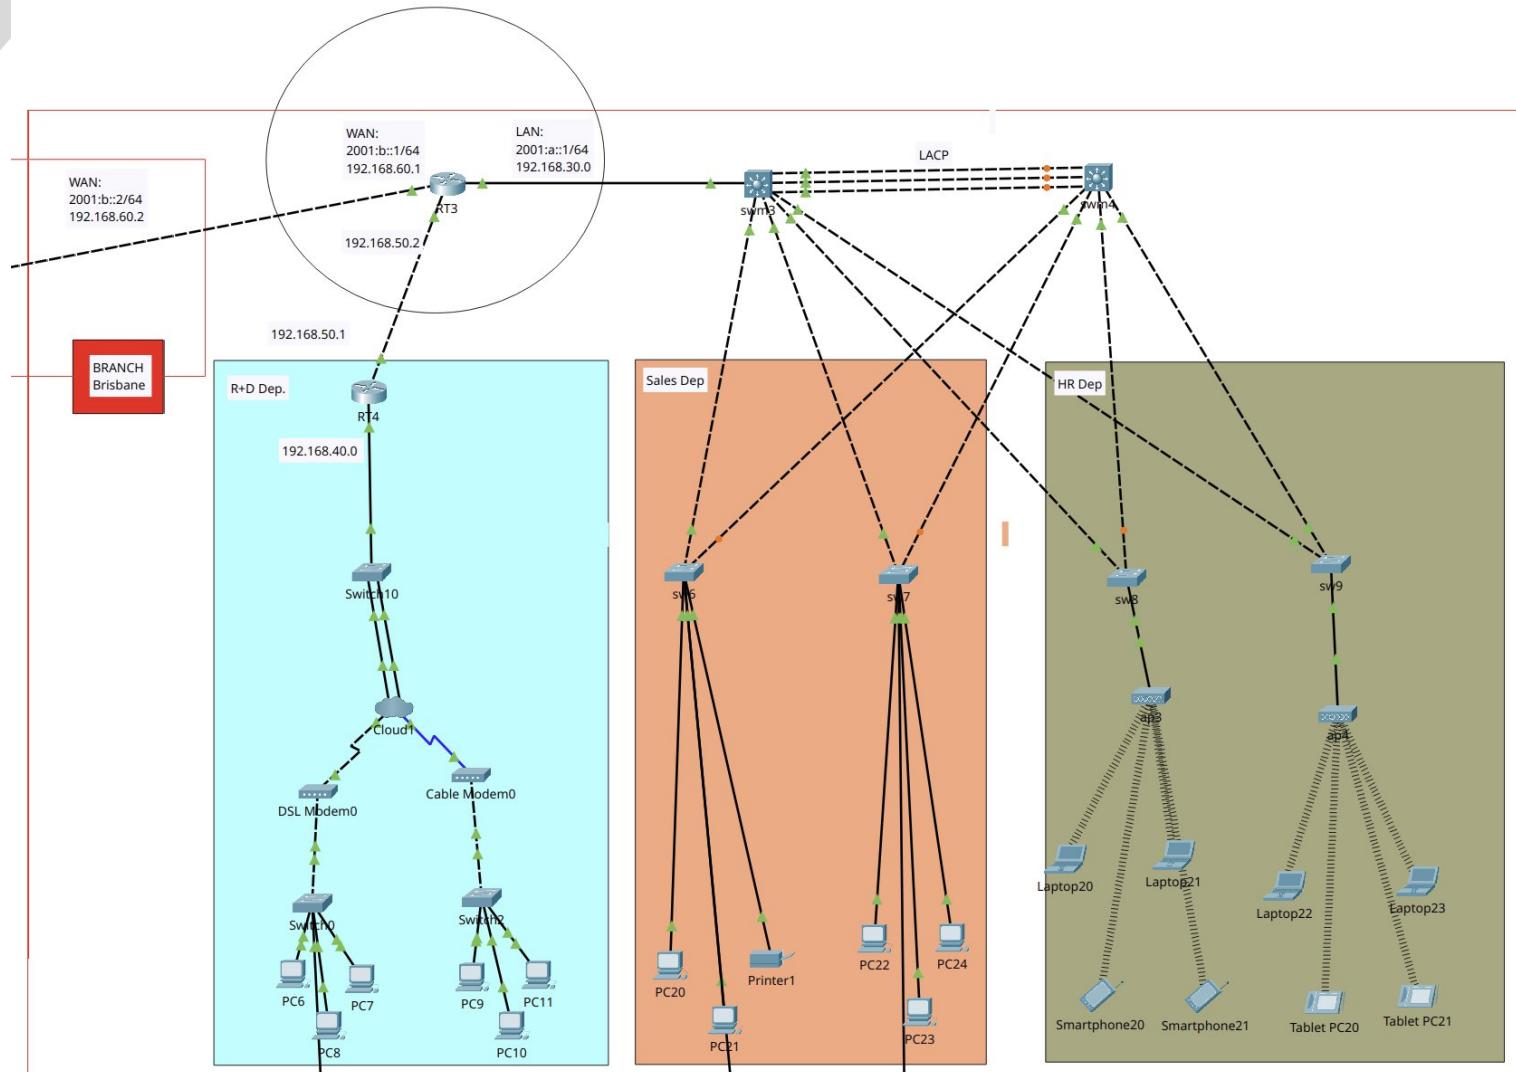

ABC Enterprises wants to improve its network due to old infrastructure, security and reliability WAN connectivity between Sydney Branch and Brisbane Branch.

Sydney Branch

Brisbane Branch

Simulation Software & Tools

- Cisco Packet Tracer 8.2.2
- Ubuntu 24.04 LTS
- Wireshark 4.2.2

Network Details

Sydney Branch

Type: LAN/WAN

Topology: Dual-Star high
availability

Architecture: 3-Tier

Brisbane Branch:

Legal & security: Policies and Procedures

Legal & security

ABC Enterprises adopts security technologies to ensure data protection. The company's policies are outlined below.

Legal & security

Service Password Encryption

Policy to prevent access to plain-text passwords in network devices.

ISO/IEC 27001

Legal & security

Mandatory Login Password

Policy on all network devices that requires a login password for any access to routers or switches.

NIST SP 800-53 (IA-2)

Legal & security

VPN Site-to-Site

Policy implements IPSec to protect data in transit between different company branches over internet.

NIST SP 800-77

Legal & security

Access Control Lists (ACLs)

Policy to filter traffic and control access between subnets, enhance internal network security.

ISO/IEC 27002 (s13)

Legal & security

Secure Remote Access to infrastructure

Policy to protect remote access by Telnet and SSH to network devices using password-protected and encrypted.

NIST SP 800-5

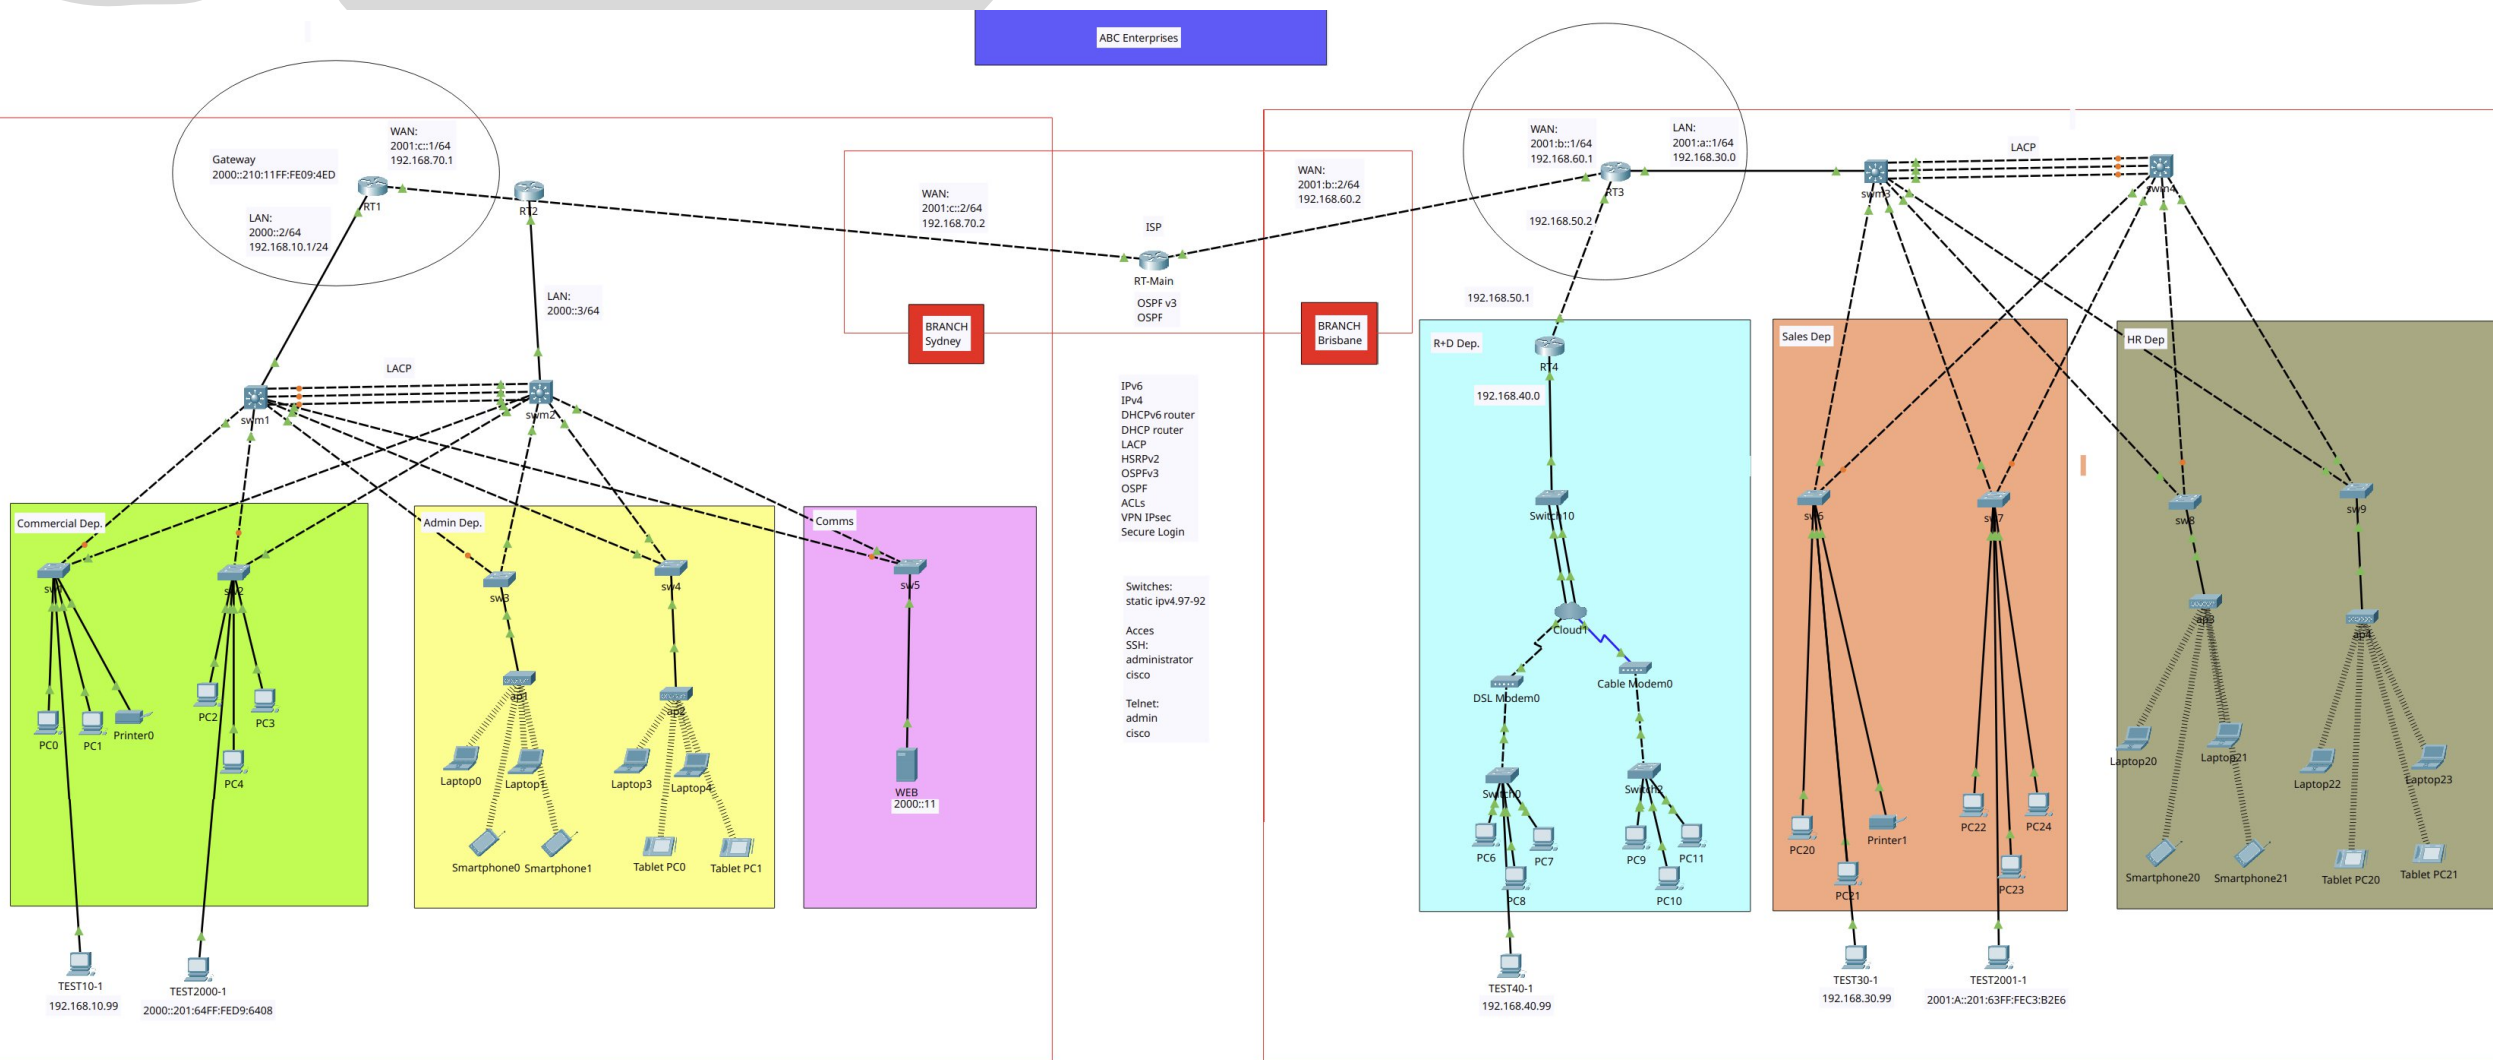

The left side of the slide features several abstract, overlapping gray shapes. These shapes are irregular and organic, resembling soft-edged polygons or fluid blobs. They are arranged in a way that they appear to be layered, with some shapes partially obscuring others. The colors are various shades of gray, from light to medium-dark, creating a subtle gradient effect. The overall composition is minimalist and modern, providing a clean background for the text on the right.

WAN Configuration

Installation Plan

Network

WAN Configuration

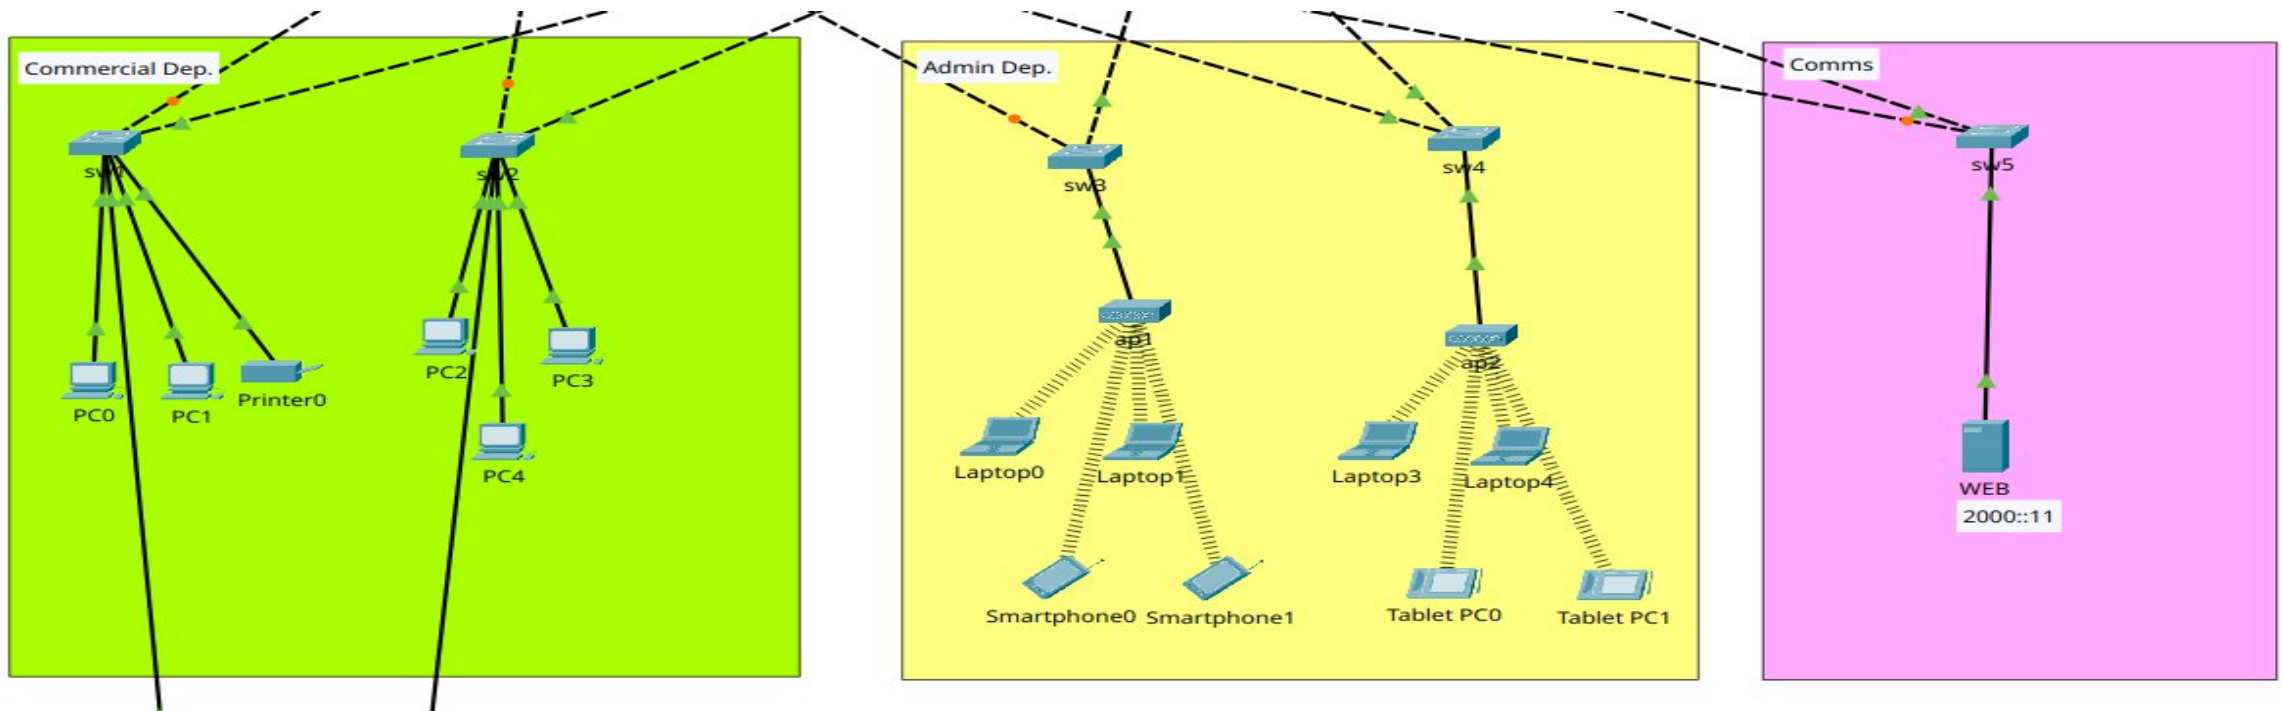

- Secure Access by SSH & Telnet
- Additional Protocols: DHCP
- Additional Protocols: LACP
- Additional Protocols: HSRP
- Additional Protocols: OSPF
- Additional Protocols: OSPF
- WAN protocols: ACL
- WAN Protocols: VPN
- WAN Protocols: PPP
- Dynamic NAT
- Firewall Single-port
- Logging Network

Testing HSRP

Sydney – IPv6

HSRP

Primary (priority 120) and secondary router (priority 100).

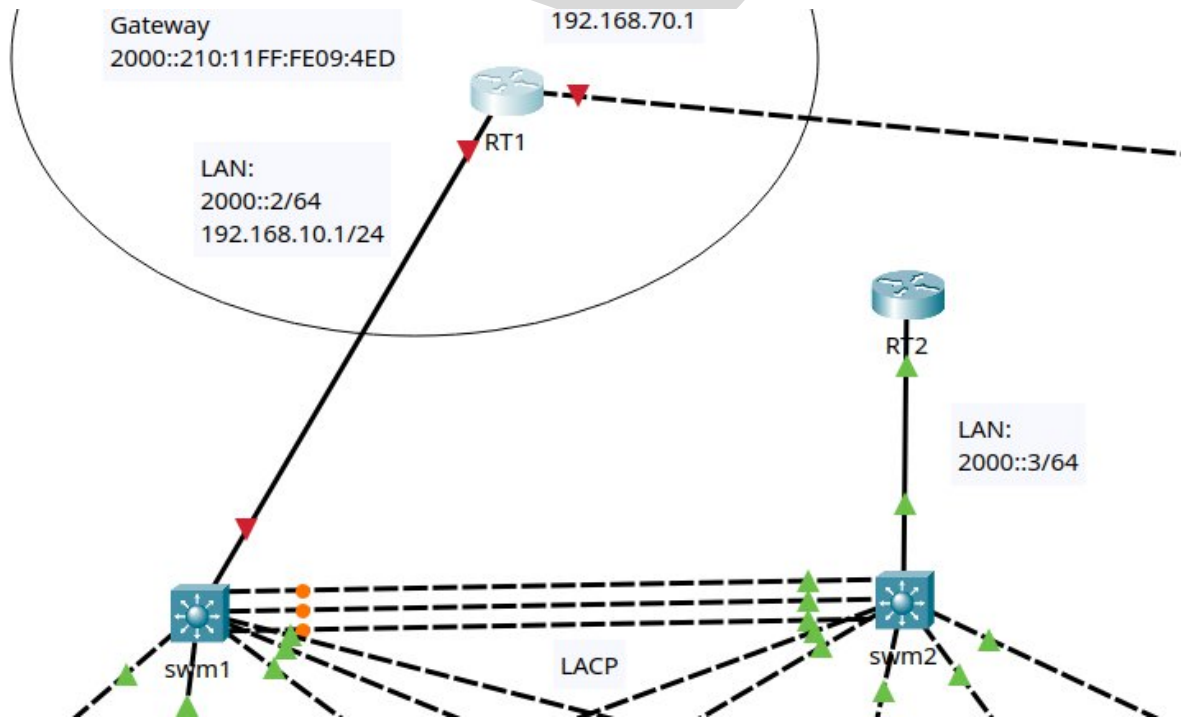

The image displays two terminal windows side-by-side, representing the command-line interfaces of two routers, RT1 and RT2. Both windows show the output of the 'show standby' command for the GigabitEthernet0/0 interface, which is configured for HSRP Group 1. RT1 is the primary router with a priority of 120, while RT2 is the secondary router with a default priority of 100. Both routers are in an 'Active' state. The virtual IP address for both is FE80::5:73FF:FEA0:1, and the active virtual MAC address is 0005.73A0.0001. The group name is 'hsrp-Gig0/0-1'. The hello time is 3 seconds, and the hold time is 10 seconds. On RT1, preemption is enabled, and the next hello is sent in 1.755 seconds. On RT2, preemption is disabled, and the next hello is sent in 0.539 seconds. Both routers indicate that the active router is local and the standby router is unknown.

```
RT1#  
RT1#  
RT1#  
RT1#  
RT1#  
RT1# show standby  
GigabitEthernet0/0 - Group 1 (version 2)  
  State is Active  
    7 state changes, last state change 00:00:18  
  Virtual IP address is FE80::5:73FF:FEA0:1  
  Active virtual MAC address is 0005.73A0.0001  
  Local virtual MAC address is 0005.73A0.0001 (v2 IPv6  
default)  
  Hello time 3 sec, hold time 10 sec  
    Next hello sent in 1.755 secs  
  Preemption enabled  
  Active router is local  
  Standby router is unknown  
  Priority 120 (configured 120)  
  Group name is hsrp-Gig0/0-1 (default)  
RT1#  
Copy Paste
```

```
RT2#  
RT2#  
RT2#  
RT2#  
RT2#  
RT2# show standby  
GigabitEthernet0/0 - Group 1 (version 2)  
  State is Active  
    7 state changes, last state change 00:00:18  
  Virtual IP address is FE80::5:73FF:FEA0:1  
  Active virtual MAC address is 0005.73A0.0001  
  Local virtual MAC address is 0005.73A0.0001 (v2 IPv6  
default)  
  Hello time 3 sec, hold time 10 sec  
    Next hello sent in 0.539 secs  
  Preemption disabled  
  Active router is local  
  Standby router is unknown  
  Priority 100 (default 100)  
  Group name is hsrp-Gig0/0-1 (default)

HSRP

Bidirectional trace route between Sydney Branch and Brisbane Branch over IPv6

The image shows two side-by-side Windows command prompt windows. The left window, titled 'TEST2000-99_', shows a traceroute from Sydney Branch to Brisbane Branch. The right window, titled 'TEST2001A-1', shows a traceroute from Brisbane Branch to Sydney Branch. Both traceroutes show a path of four hops with 0 ms latency at each step.

```
TEST2000-99_

Testing ACL

WAN – IPv4

ACL

Example ACL on R1 (Sydney Branch)

```
RT1
RT1#
RT1#show access-lists
Extended IP access list 110
 10 permit ip 192.168.10.0 0.0.0.255 192.168.30.0 0.0.0.255
 20 permit ip 192.168.10.0 0.0.0.255 192.168.40.0 0.0.0.255
(1 match(es))
 30 permit ip 192.168.30.0 0.0.0.255 192.168.10.0 0.0.0.255
 40 permit ip 192.168.40.0 0.0.0.255 192.168.10.0 0.0.0.255
```

ACL

Deny rule for testing traffic from 192.168.10.99 (Brisbane)

```
RT1#show access-lists
Extended IP access list 110
 10 deny ip 192.168.10.0 0.0.0.255 192.168.30.0 0.0.0.255
 20 deny ip 192.168.30.0 0.0.0.255 192.168.10.0 0.0.0.255
```

```
Pinging 192.168.10.99 with 32 bytes of data:
```

```
Request timed out.
Request timed out.
Request timed out.
Request timed out.
```

```
Ping statistics for 192.168.10.99:
```

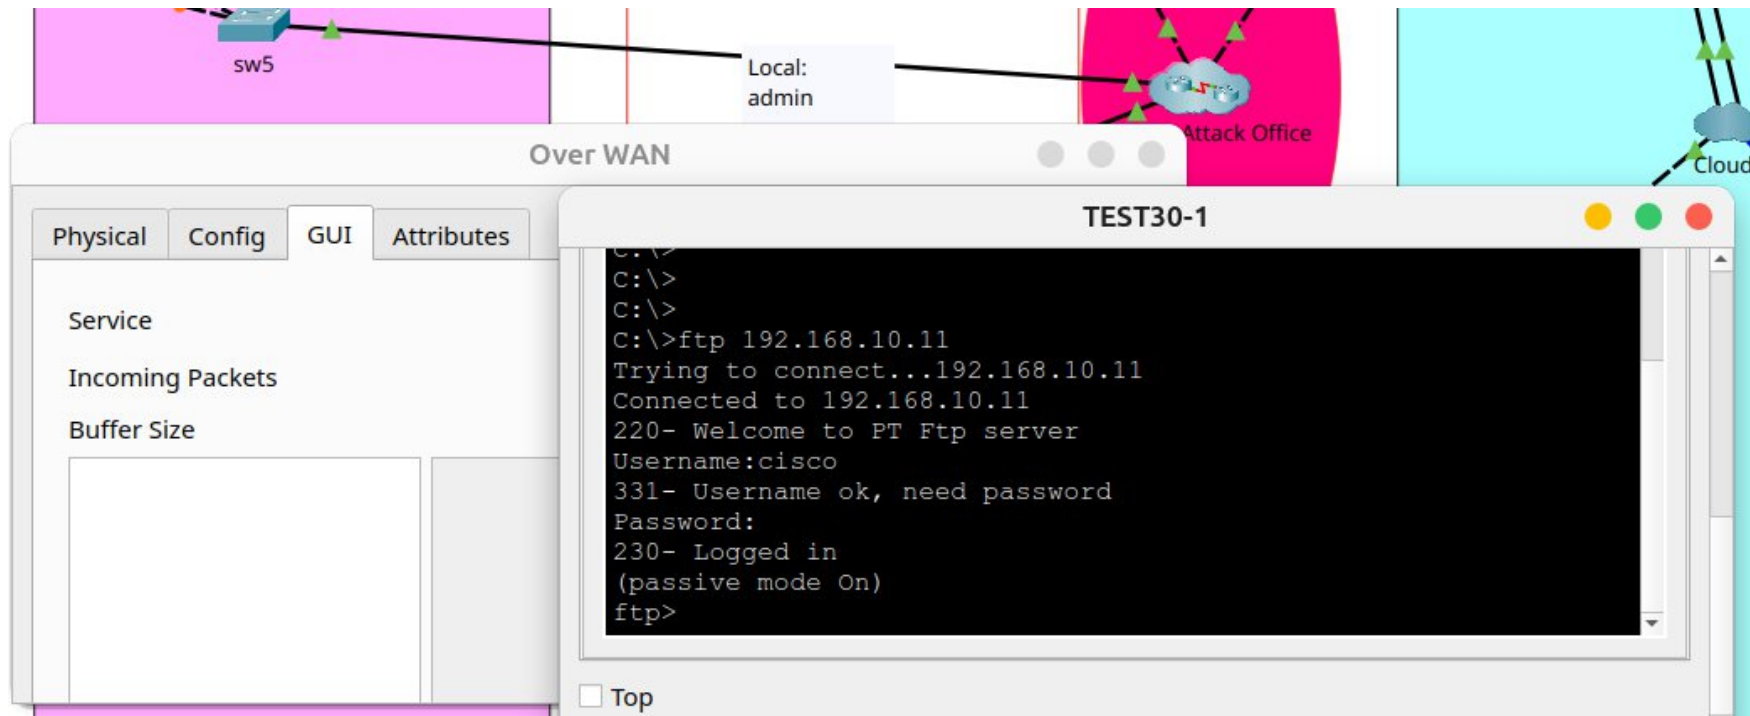

```
Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
```

Testing VPN Site-To-Site

WAN – IPv4

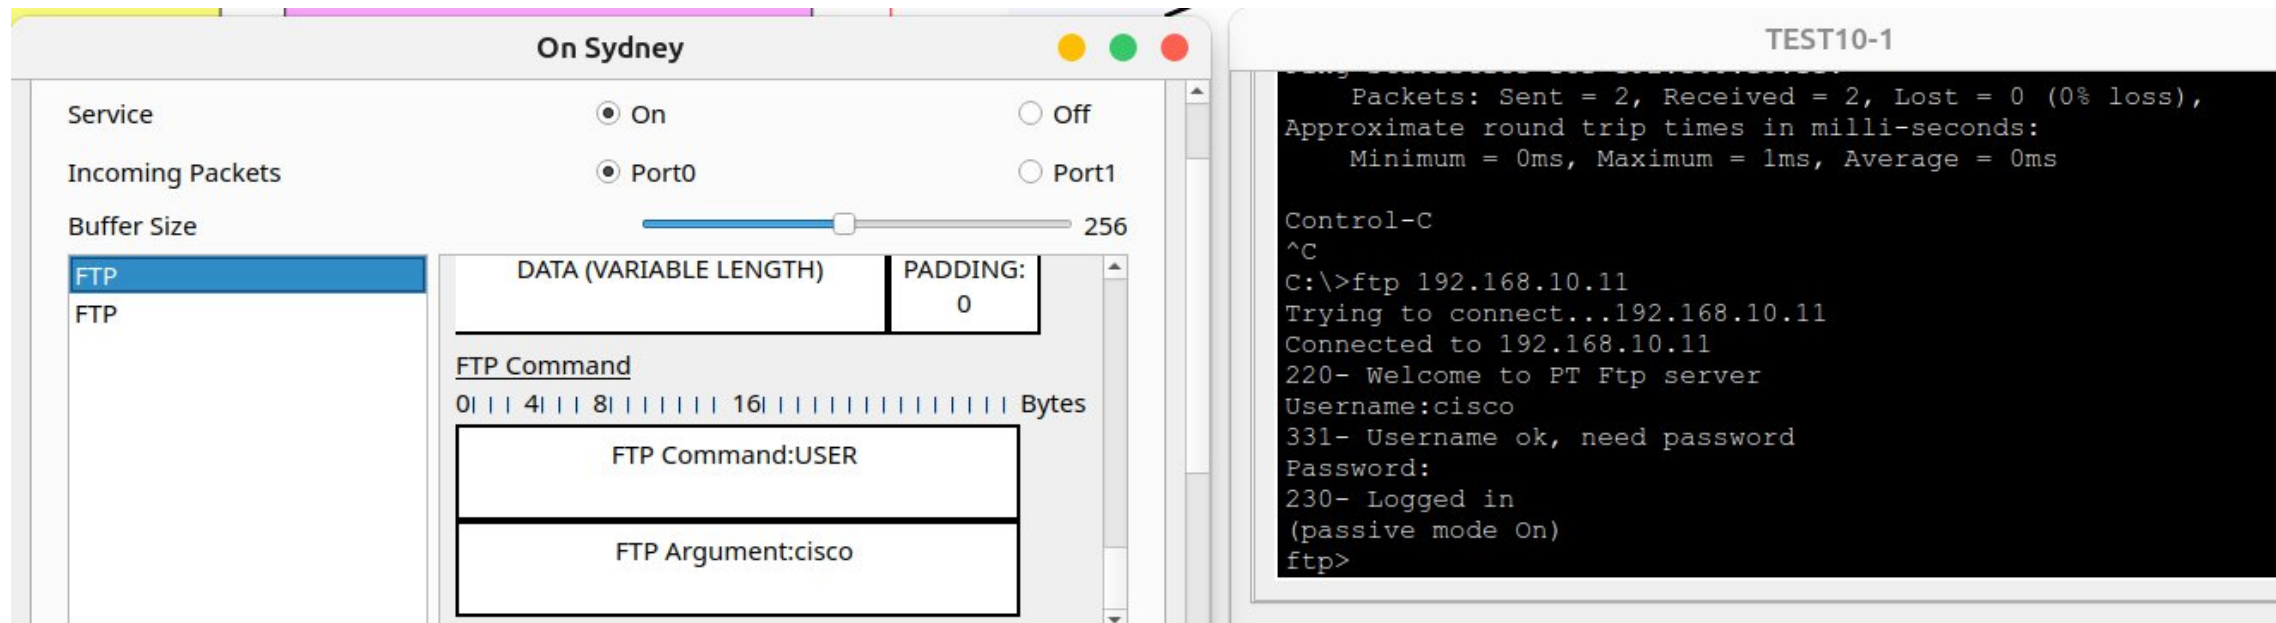

VPN Site-To-Site

Internet connection are intercepted by a criminal sniffer.
FTP Messages cannot be captured.

VPN Site-To-Site

Local connections are susceptible to attacks.
FTP Messages can be captured.

The image displays two overlapping windows. The left window, titled "On Sydney", is a network capture tool showing an FTP session. It has a sidebar with "Service" (On), "Incoming Packets" (Port0), and "Buffer Size" (256). The main area shows a list of captured packets, with the first one selected, showing "FTP Command" and "FTP Argument:cisco". The right window, titled "TEST10-1", is a terminal window showing the output of an FTP client command. It displays connection statistics, round trip times, and the successful login of the user "cisco".

On Sydney

Service: ☒ On ☐ Off

Testing Encapsulation PPP

IPv4

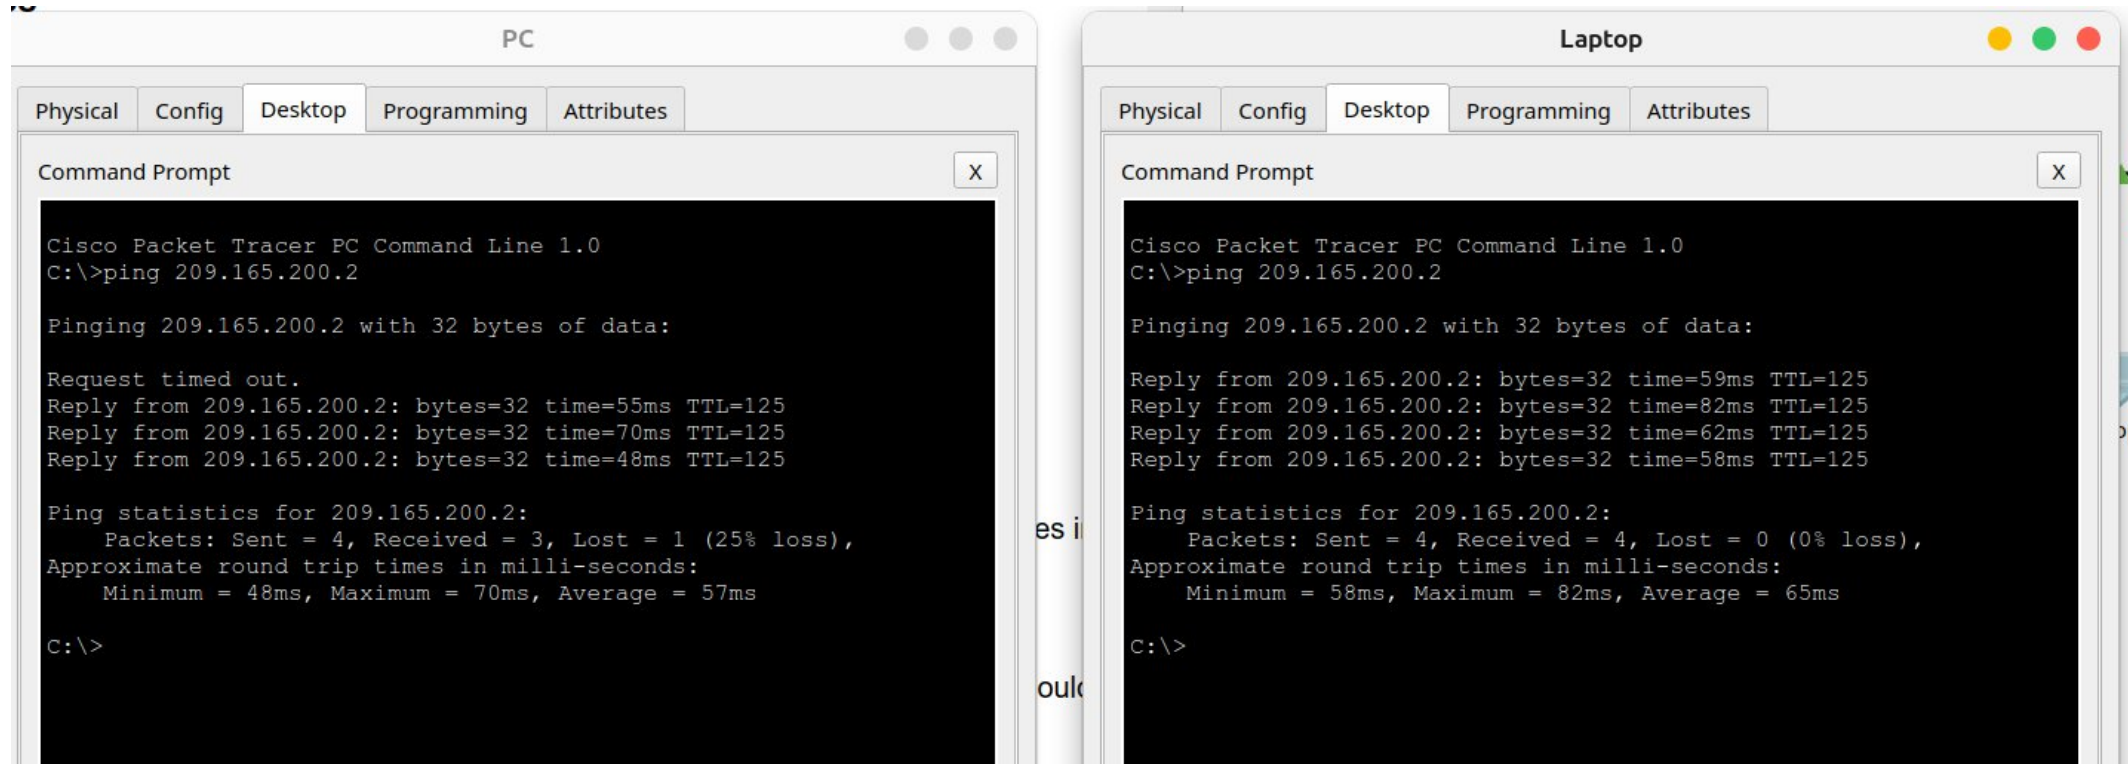

Encapsulation PPP

Implemented
CHAP as an
automatic
authentication
method.

Encapsulation PPP

Connection from Local network to WEB server are working under encapsulation method. CHAP implemented.

The image displays two Cisco Packet Tracer windows side-by-side, labeled 'PC' and 'Laptop'. Both windows show a 'Command Prompt' with the following text:

```
Cisco Packet Tracer PC Command Line 1.0
C:\>ping 209.165.200.2

Pinging 209.165.200.2 with 32 bytes of data:

Request timed out.
Reply from 209.165.200.2: bytes=32 time=55ms TTL=125
Reply from 209.165.200.2: bytes=32 time=70ms TTL=125
Reply from 209.165.200.2: bytes=32 time=48ms TTL=125

Ping statistics for 209.165.200.2:
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 48ms, Maximum = 70ms, Average = 57ms

C:\>
```

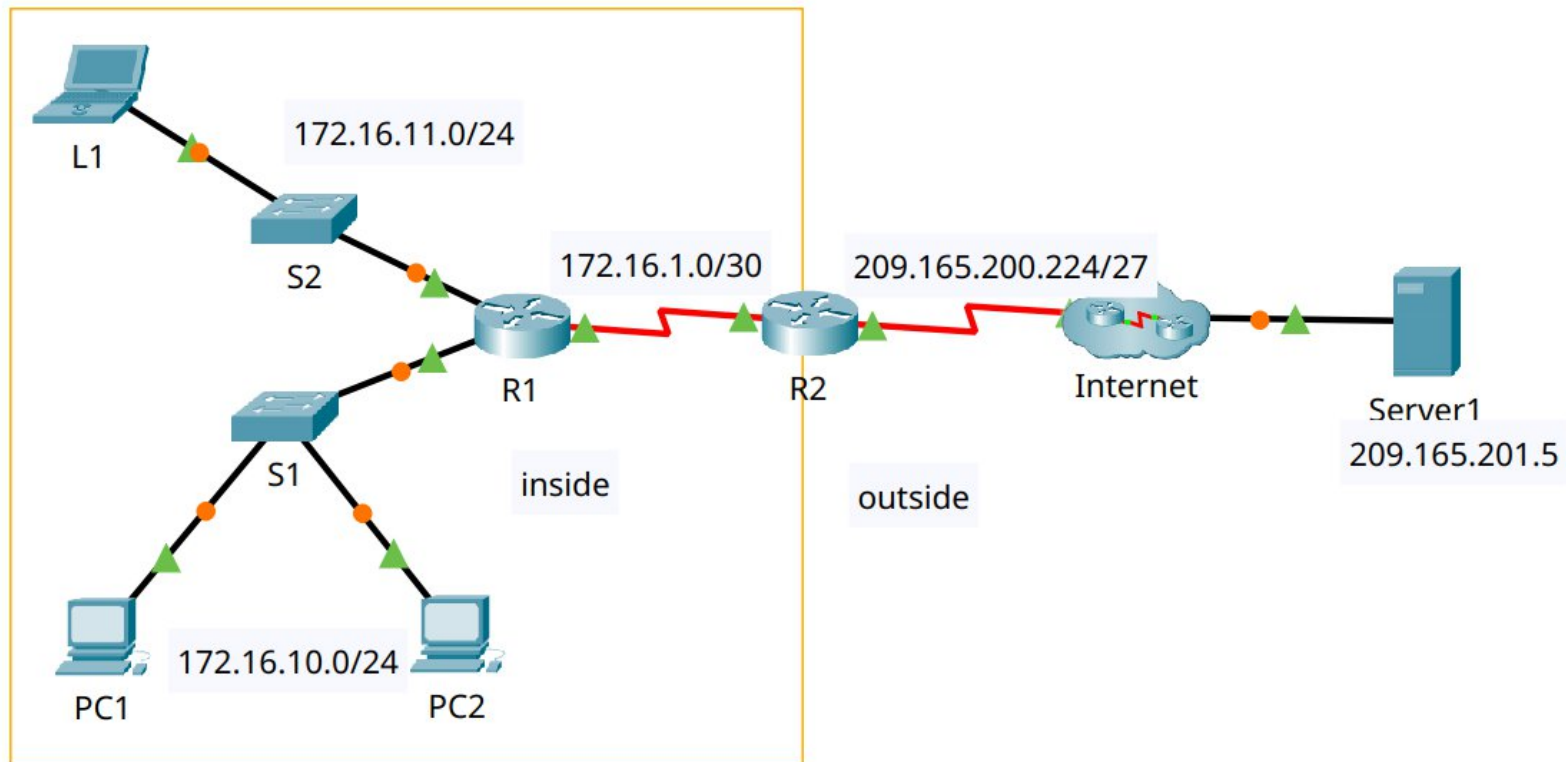

The PC window shows a failed ping to 209.165.200.2 with 25% loss. The Laptop window shows a successful ping to 209.165.200.2 with 0% loss.

Dynamic NAT

IPv4

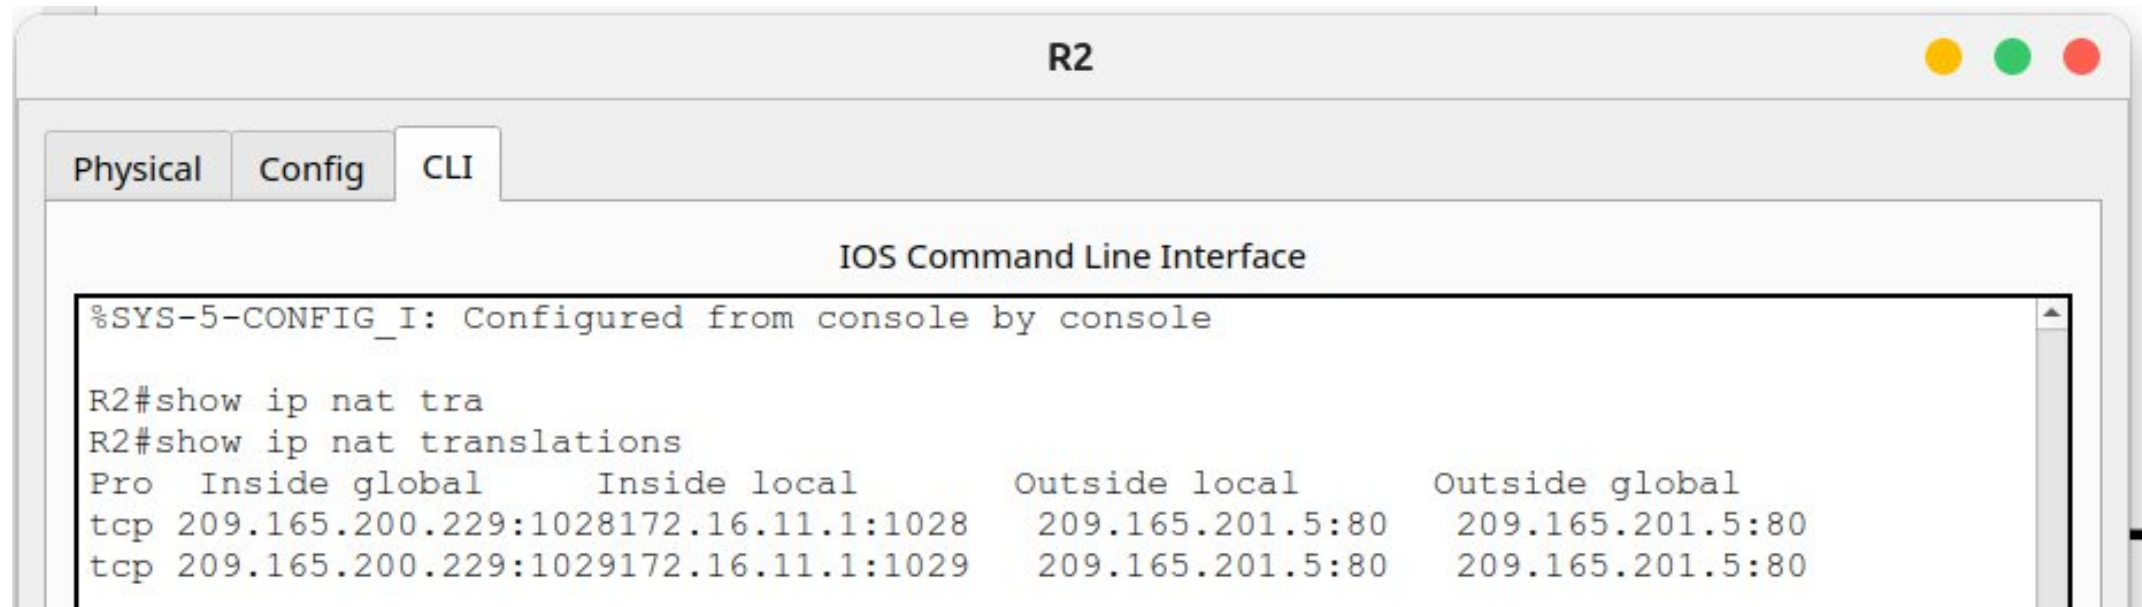

Dynamic NAT

WAN Network

Dynamic NAT

R2 NAT Translations table on

The screenshot shows a terminal window titled 'R2' with three tabs: 'Physical', 'Config', and 'CLI'. The 'CLI' tab is active, displaying the 'IOS Command Line Interface'. The output of the command 'show ip nat translations' is shown, indicating two active NAT translations for TCP traffic from the inside network (172.16.11.1 and 172.16.11.1) to the outside network (209.165.201.5).

```
%SYS-5-CONFIG_I: Configured from console by console

R2#show ip nat tra
R2#show ip nat translations
Pro  Inside global      Inside local       Outside local      Outside global
tcp  209.165.200.229:1028 172.16.11.1:1028   209.165.201.5:80   209.165.201.5:80
tcp  209.165.200.229:1029 172.16.11.1:1029   209.165.201.5:80   209.165.201.5:80
```

Dynamic NAT

Summary Technologies & Protocols

Summary Technologies

DHCP (Dynamic Host Configuration Protocol):

Automatically assigns IP, gateway, and DNS addresses to devices on the network

LACP (Link Aggregation Control Protocol):

Combines several physical links to form a single logical link for the purpose of increasing bandwidth also providing redundancy when one of the switches fails.

Summary Technologies

HSRP (Hot Standby Router Protocol):

Provides redundancy. If the primary router fails, another router automatically takes over, ensuring service continuity.

OSPF (Open Shortest Path First):

Dynamic routing that allows the calculation of the most efficient route to send packets in a network.

Summary Technologies

ACLs (Access Control Lists):

Rules applied to allow or deny traffic. They are used to filter traffic and improve security.

VPN IPsec (Internet Protocol Security):

Creates secure (encrypted) connections over the Internet between two networks (site-to-site), protecting data confidentiality and integrity.

Summary Technologies

PPP Authentication (Point-to-Point Protocol Authentication):

Responsible for establishing point-to-point connections and provides encapsulation to facilitate the connection. Also supports authentication mechanisms (CHAP) between two network devices to add an additional layer of security.

Summary Technologies

Dynamic NAT (Dynamic Network Address Translation):

Map a public network to multiple private networks on a WAN to communicate with external IPs..
